Flow Sensor

For suction verification of very small workpieces

The flow sensor enables more reliable suction verification than a pressure sensor.

New A measuring flow rate range of 0.0 to 0.1 L/min (-X502) has been added.

Flow Sensor

Flow Sensor
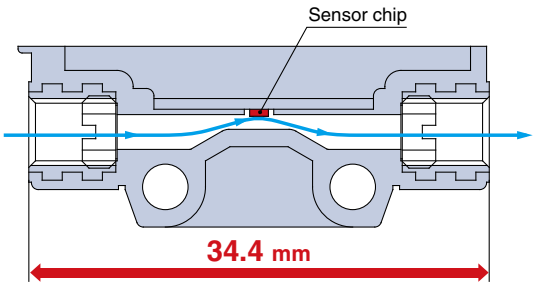
PFMV5 Series p. 6

Compact and Lightweight

The taper-shaped flow passage in front of the sensor chip enables stable sensing.



Space-saving piping

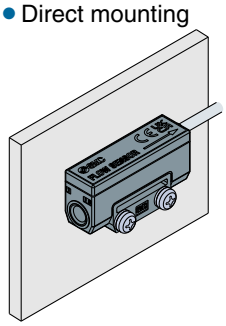
The product is mountable in locations with limited space as piping space is not required.

∗ When using a One-touch fitting (KQ2L04-M5N)

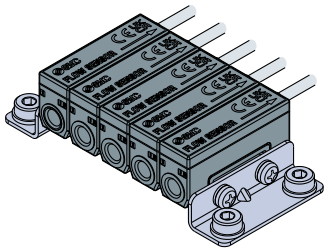
With a bend-resistant cable

Mounting

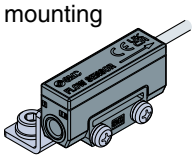
- Direct mounting



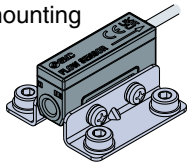
- Manifold mounting



- Single-side bracket mounting



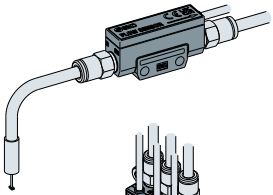
- Both-side bracket mounting



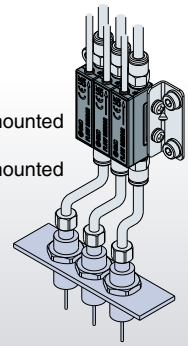
Applications

- For suction verification of very small workpieces

· Suction of small components can be verified.
· Highly applicable to small nozzles.
· Nozzle clogging and crushing can be detected.

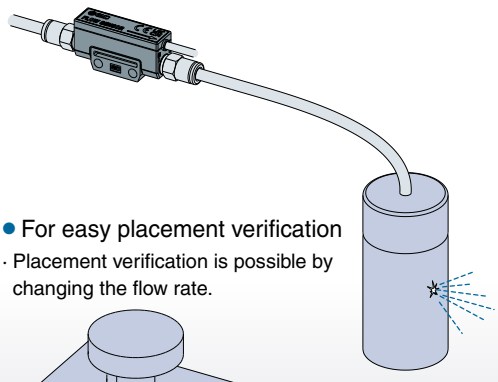


· Sensors can be mounted on a manifold.
· Sensors can be mounted near pads.



- For leakage testing of 0.1 L/min or less

· Pin holes in molded parts can be easily detected.



- For easy placement verification

· Placement verification is possible by changing the flow rate.

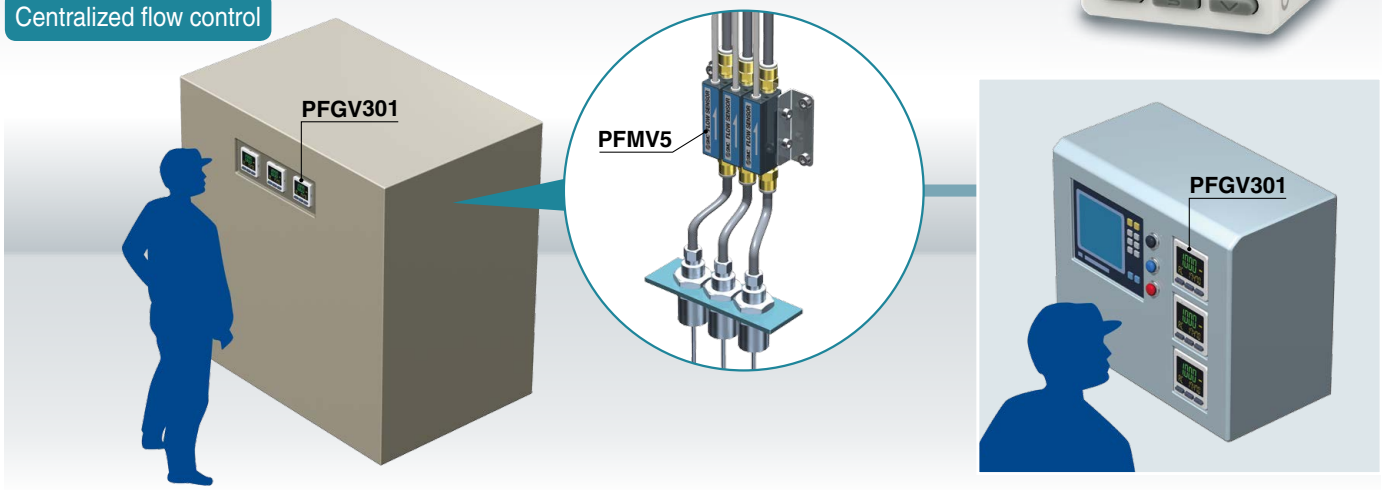
3-Screen Display Digital Flow Monitor

PFGV301 Series p. 13

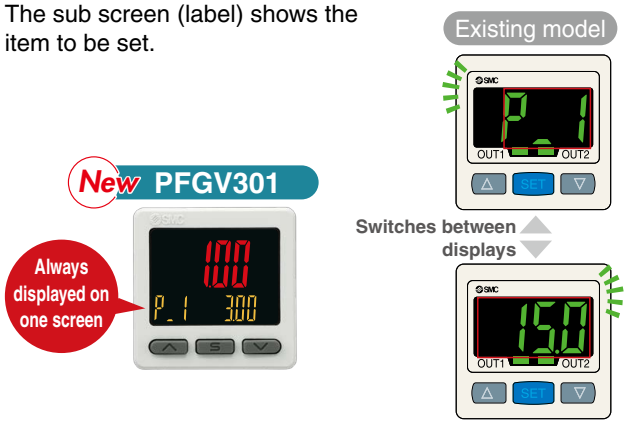
Allows for the monitoring of remote lines

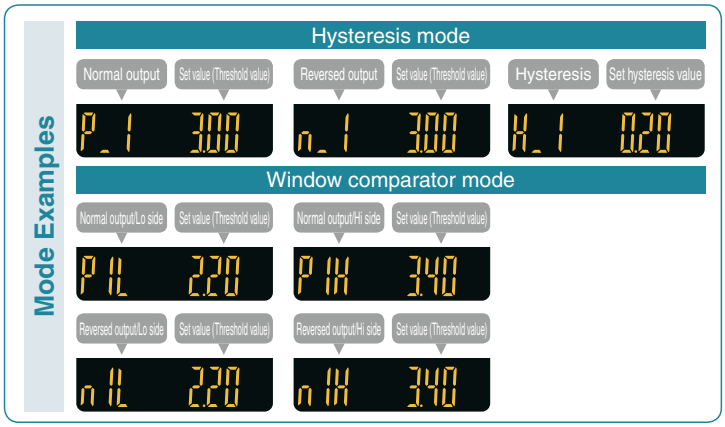
Centralized flow control



Visualization of settings

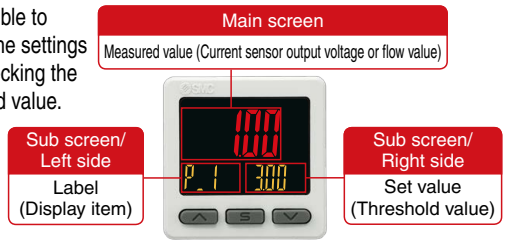
The sub screen (label) shows the item to be set.



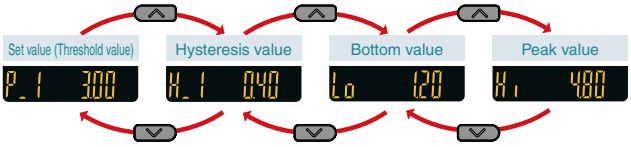


Easy screen switching

It is possible to change the settings while checking the measured value.



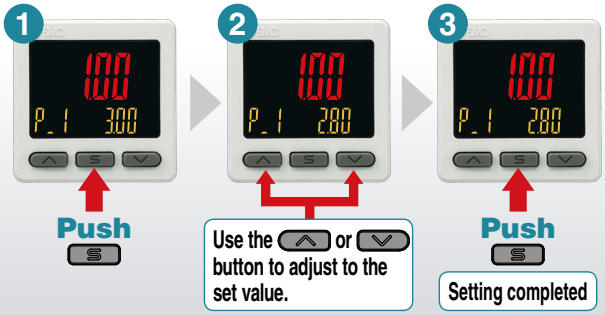
The sub screen can be switched by pressing the up/down buttons.



* Either “Input of line name” or “Display OFF” can be added via the function settings.

Simple 3-step setting

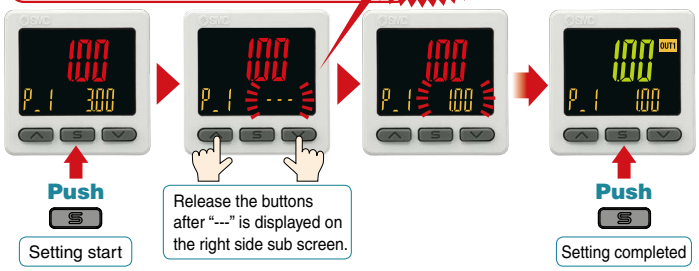
When the S button is pressed and the set value (P_1) is being displayed, the set value (threshold value) can be set. When the S button is pressed and the hysteresis (H_1) is being displayed, the hysteresis value can be set.



With a snap shot function for set value reading

Pressing the ▲ and ▼ buttons simultaneously for a minimum of 1 second will make the set value (threshold value) the same as the current flow value.

Snap shot function



NPN/PNP switch function

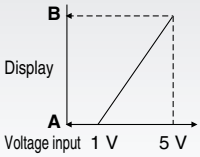
The number of stock items can be reduced.

NPN PNP

Analog output of 0 to 10 V is also available.

Voltage output	1 to 5 V	Switchable
	0 to 10 V	
Current output	4 to 20 mA	Fixed

Input range selection (for Pressure/Flow rate)



The displayed value to the sensor input can be set as required.
(Voltage input: 1 to 5 V)
Pressure switch/Flow switch can be displayed.

A is displayed for 1 V.
B is displayed for 5 V. The range can be set as required.

■ Pressure Sensor for General Fluids/PSE570

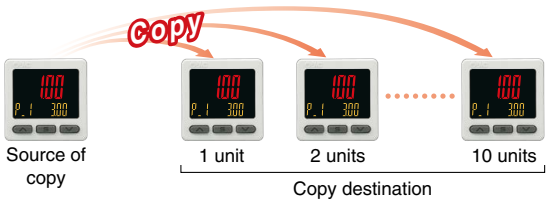
	A	B
PSE570	0	1000
PSE573	−100	100
PSE574	0	500

Set A and B to the values shown in the table above.

Convenient functions

Copy function

The set values of the monitor can be copied.



Security code

The key locking function keeps unauthorized persons from tampering with the settings.

Power saving function

Power consumption is reduced by turning off the monitor.

Current consumption*1	Reduction rate*2
25 mA or less	Approx. 50% reduction

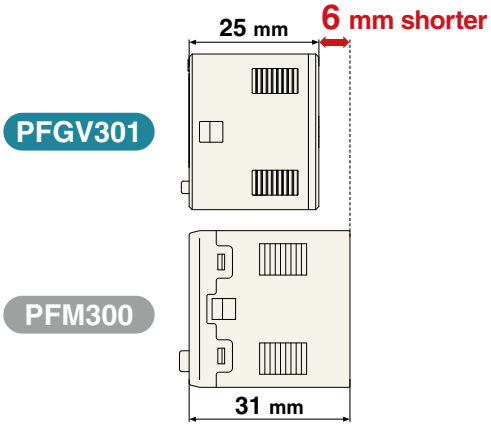
*1 During normal operation *2 In power saving mode

External input function

The accumulated value, peak value, and bottom value can be reset remotely.

Compact & Lightweight

- **Compact: Max. 6 mm shorter**
- **Lightweight: Max. 5 g lighter (30 g → 25 g)**



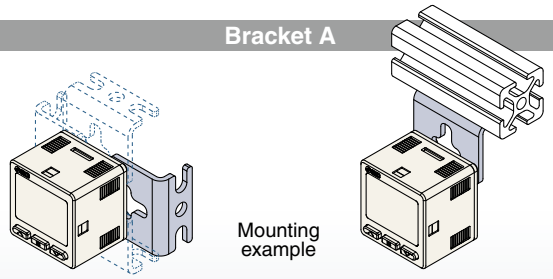
Functions

- Output operation
- Simple setting mode
- Display color
- Delay time setting
- Digital filter setting
- FUNC output switching function
- Selectable analog output function
- External input function
- Auto-shift function
- Forced output function
- Peak/Bottom value display
- Setting of a security code
- Key-lock function
- Reset to the default settings
- Display with zero cut-off setting
- Auto-preset function
- Selection of the display on the sub screen
- Analog output free range function
- Error display function
- Copy function
- Selection of power saving mode

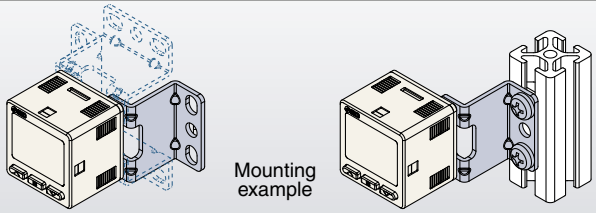
Mounting

Bracket configuration allows for mounting in four orientations.

Bracket A



Bracket B



Panel mounting

Mountable side by side without clearance

One opening!

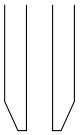
Model Selection

Nozzle Diameter and Flow Rate Characteristics (Approximate values)

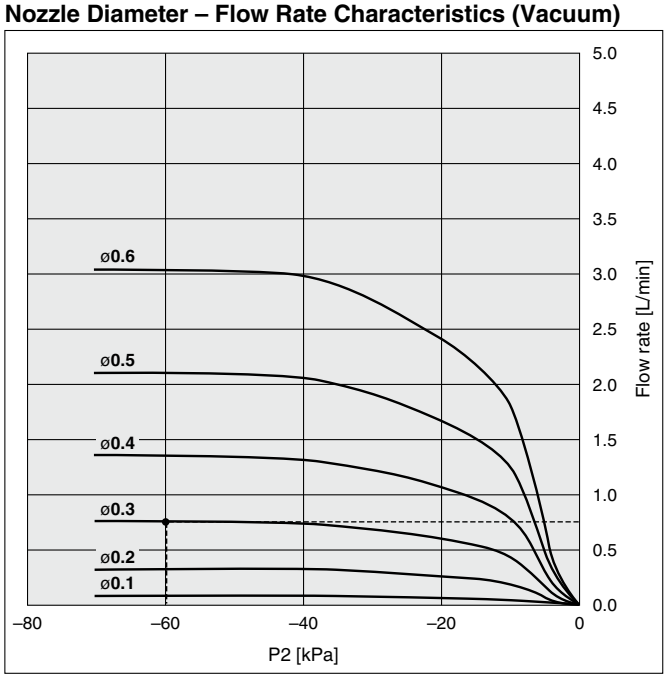
Use the following graphs as a reference to select sensor measuring range.

P2: Nozzle internal pressure

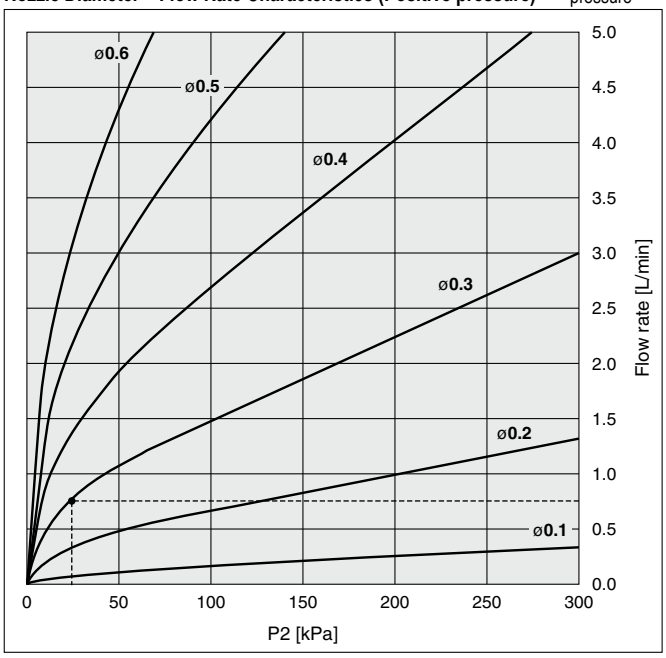


P1: Atmospheric pressure

Nozzle Diameter – Flow Rate Characteristics (Vacuum)



Nozzle Diameter – Flow Rate Characteristics (Positive pressure)

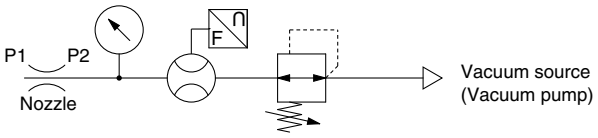


Example (Vacuum)

Selecting conditions:

Nozzle diameter: ø0.3 P1: 0 [kPa]
P2: –60 [kPa]

The flow rate will be 0.7 to 0.8 [L/min] based on the graph.
→ Select the PFMV510-1.

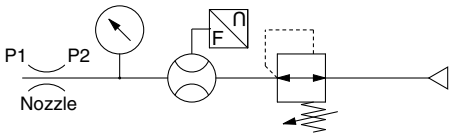


Example (Positive pressure)

Selecting conditions:

Nozzle diameter: ø0.3 P1: 0 [kPa]
P2: 20 [kPa]

The flow rate will be 0.7 to 0.8 [L/min] based on the graph.
→ Select the PFMV510-1.



∗ Since the calculated value may not meet the approximate value due to leakage and pressure loss in the piping system, please check the result by using actual equipment.

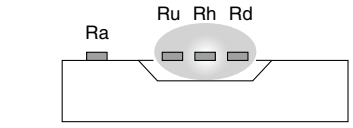
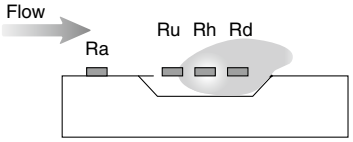
Detection Principle

This MEMS sensor chip consists of upstream temperature measuring sensor (Ru) and downstream temperature measuring sensor (Rd), which are placed symmetrically from the center of a platinum thin film coated heater (Rh) mounted on a membrane, and an ambient temperature sensor (Ra) for measuring gas temperature.
The principle is shown as the diagram on the right. (a) When the gas is static, the temperature distribution of heated gas centered around Rh is uniform, and Ru and Rd have the same resistance. (b) When the gas flows from the left side, it upsets the balance of the temperature distribution of heated gas, and the resistance of Rd becomes greater than that of Ru.
The difference in resistance between Ru and Rd is proportional to the flow velocity, so measurement and analysis of the resistance can show the flow direction and velocity of the gas.
Ra is used to compensate the gas and/or ambient temperature.



(a) The gas is static.



(b) The gas flows from the left side.

Specifications

Filtration degree	3 μm (Nominal)
Fluid	Air
Operating pressure range	–100 to 600 kPa
Ambient temperature	0 to 60°C (No freezing)
Applicable tubing material	Soft nylon, Polyurethane
Applicable tubing O.D./I.D.	ø6/ø4

Replacement element part no.···ZFC-EL013-A

⚠Caution

1. To screw in OUT side port (M5 male thread), tighten by hand before giving it an additional 1/4 turn with a tightening tool.
2. When replacing the element, remove the IN side body using the hexagon surface on the IN side, then replace the element. After replacing the element, tighten the IN side body with the tightening torque 0.5 to 0.7 N·m.
3. As a rule, replace the element when the pressure drops by 20 kPa.
4. The response time of the single flow sensor is 5 msec. However, take great care since the response may be delayed depending on the element clogged conditions.

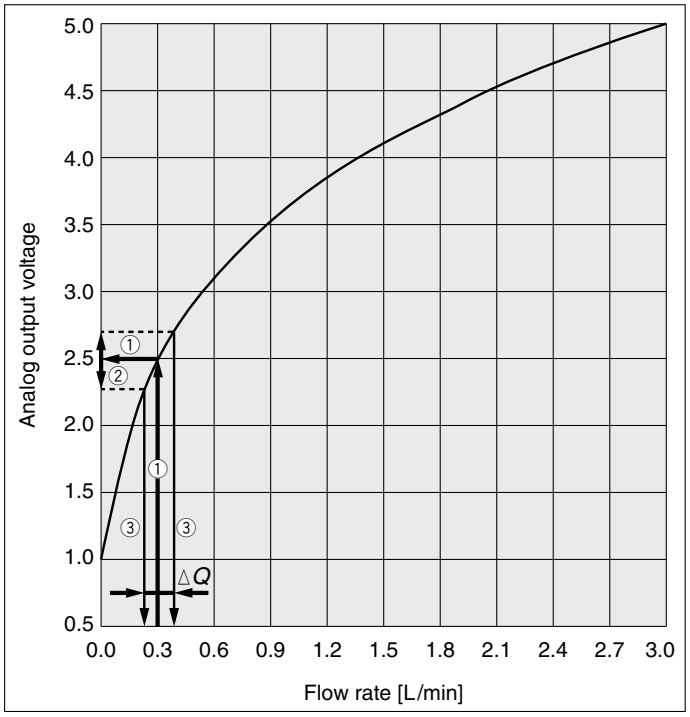
*1 Rated flow range of the applicable flow sensor. The flow rate stated in the specifications is for under normal conditions (20°C, 101.3 kPa (absolute pressure), 65% R.H.).
*2 The accuracy is with respect to the voltage display. When the flow rate display function is selected, the display accuracy and repeatability should be exactly like the graph on page 15.
*3 Value without digital filter (at 0 ms)
*4 If the flow fluctuates around the set value, be sure to keep a sufficient margin. Otherwise, chattering will occur.
*5 Setting is only possible for models with analog output.
*6 When selecting 0 to 10 V, refer to the analog output graph for the allowable load current.
*7 Setting is only possible for models with external input.
*8 Setting is only possible for models with the unit selection function.
*9 The response time indicates when the set value is 90% in relation to the step input.
* Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.

Display Accuracy and Repeatability when Combined with PFMV5. (Calculation Example)

PFMV530-1



When the flow rate display function for the PFGV301 series is selected, calculate the repeatability from the analog output characteristics graph (page 9).

Example) For PFMV530-1 (0 to 0.3 L/min)

① When the actual flow rate is 0.3 L/min, the PFMV530-1 outputs approximately 2.5 V of analog voltage (Arrow ① in the graph on the left).

② The PFMV5 series has a repeatability of ±2% F.S. (±80 mV) (Arrow ② in the graph on the left).

③ When this accuracy is converted to a flow rate, it becomes approximately ±3% F.S. (±0.09 L/min), and this width becomes the repeatability when the flow rate is displayed (arrow ③, and the width of △ Q, in the graph on the left).

The flow rate display accuracy can be also calculated from the PFMV5 series accuracy (±5% F.S.).

Settable Range and Voltage Input Range

The settable rate range is the range that can be set in the switch.
The inputtable range is the range that satisfies the switch specifications (accuracy, linearity, etc.).
It is possible to set a value outside of the inputtable range if it is within the settable range, however, the specification is not guaranteed.

Item	Input voltage
Voltage input range	0 / 0.8 V / 5.10 V / 5.20 V
Display voltage range	LLL / HHH
Set voltage range	

The settable rate range is the flow range that can be set in the switch.
The rated flow range is the flow rate range that satisfies the switch specifications (accuracy, linearity, etc.).
It is possible to set a value outside of the rated flow range if it is within the settable range, however, the specification is not guaranteed.

Sensor	Flow rate range
	−3 L/min / −1 L/min / −0.5 L/min / 0 / 0.1 L/min / 0.5 L/min / 1 L/min / 3 L/min
PFMV505-X502	0 to 0.1 L/min −0.005 L/min to 0.105 L/min −0.005 L/min to 0.105 L/min
PFMV505	0 to 0.5 L/min −0.025 L/min to 0.525 L/min −0.025 L/min to 0.525 L/min
PFMV510	0 to 1 L/min −0.05 L/min to 1.05 L/min −0.05 L/min to 1.05 L/min
PFMV530	0 to 3 L/min −0.15 L/min to 3.15 L/min −0.15 L/min to 3.15 L/min
PFMV505F	−0.5 L/min to 0.5 L/min −0.525 L/min to 0.525 L/min −0.525 L/min to 0.525 L/min
PFMV510F	−1 L/min to 1 L/min −1.05 L/min to 1.05 L/min −1.05 L/min to 1.05 L/min
PFMV530F	−3 L/min to 3 L/min −3.15 L/min to 3.15 L/min −3.15 L/min to 3.15 L/min

The values shown on the graph are the displayed flow rate range and set flow rate range when PFMV5 series and PFGV301 series are connected.

PFGV301 Series
Made to Order

Please contact SMC for detailed dimensions, specifications, and delivery times.

1 Conversion Cable for the PFMV30□ Lead Wire with Connector

The conversion cable allows for connection between the existing PFMV30□ lead wire with connector and the PFGV301.

PFMV30□ → PFGV301 + Conversion Cable Correspondence Table

Existing flow monitor model	Output specification	① Flow monitor part no.	② Conversion cable part no.
PFMV300-□□□□-□□	NPN 2 outputs + 1–5 V outputs	PFGV301-RT-□-□□□□	ZS-28-A-X538
PFMV301-□□□□-□□	NPN 2 outputs + 4–20 mA output	PFGV301-SV-□-□□□□	
PFMV302-□□□□-□□	NPN 2 outputs + auto-shift input	PFGV301-XY-□-□□□□	
PFMV303-□□□□-□□	PNP 2 outputs + 1–5 V outputs	PFGV301-RT-□-□□□□	
PFMV304-□□□□-□□	PNP 2 outputs + 4–20 mA output	PFGV301-SV-□-□□□□	
PFMV305-□□□□-□□	PNP 2 outputs + auto-shift input	PFGV301-XY-□-□□□□

To the existing PFMV30□ wiring

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

⚠ Danger : **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

⚠ Warning: **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Caution: **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

*1) ISO 4414: Pneumatic fluid power - General rules and safety requirements for systems and their components
ISO 4413: Hydraulic fluid power - General rules and safety requirements for systems and their components
IEC 60204-1: Safety of machinery - Electrical equipment of machines - Part 1: General requirements
ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1:Robots
etc.

⚠ Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Our products cannot be used beyond their specifications. Our products are not developed, designed, and manufactured to be used under the following conditions or environments. Use under such conditions or environments is not covered.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, fuel equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogs and operation manuals.
3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

⚠ Caution

We develop, design, and manufacture our products to be used for automatic control equipment, and provide them for peaceful use in manufacturing industries.
Use in non-manufacturing industries is not covered.
Products we manufacture and sell cannot be used for the purpose of transactions or certification specified in the Measurement Act.
The new Measurement Act prohibits use of any unit other than SI units in Japan.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) **Vacuum pads are excluded from this 1 year warranty.**
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Revision History

Edition B	* A flow rate display function has been added to the voltage monitor for the PFMV3. NS
Edition C	* Not available
Edition D	* The PFMV3 has been changed to the PFGV3. * The PFMV505-X502 has been added.

⚠ Safety Instructions	Be sure to read the "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" before use.
